**DETAILED ACTION*****Election/Restrictions***

Applicant's election without traverse of Group 1, claims 1-6 in the reply filed on May 23, 2008 is acknowledged. No claims have been amended, canceled or added. Upon further consideration of the claims, it has been determined that additional restriction is required. Because Groups 1-6 were presented for restriction in the previous Office action, group numbers beginning with 7 are used here to avoid confusion with the previous Office action.

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 7, claim(s) 1-4 and 6, drawn to a peptide fingerprint comprising at least one and up to all of the peptides listed in Table 2.

Group 8, claim(s) 5, drawn to a peptide fingerprint comprising all of the peptides listed in Table 1.

The inventions listed as Groups 7 and 8 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons.

The requirement of unity of invention is not fulfilled because there is no technical relationship between these inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" means those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. In the instant case, there is no technical feature that links the two groups of inventions. The specification discloses that the peptides of Table 1 and the peptides of Table 2 are two different groups of proteins. The peptides of Table 1 are produced by collecting a column fraction (eluted presumably from the third chromatographic step, the reverse-phase column) and subjecting that fraction to mass spectrometry and subsequent analysis. The peptides of Table 2 are produced by collecting a different column fraction (eluted presumably from the third chromatographic step, the reverse-phase column) and subjecting that

second fraction to mass spectrometry and subsequent analysis. See p. 45. The peptides in each Table are defined by their peptide mass only, and the data show that the peptides in Table 1 are a different set of molecules than the peptides in Table 2. Therefore, a technical relationship is lacking between the claimed inventions involving one or more special technical features.

Because no common technical feature is present, it is clear that the claims of Groups 6-7 lack a single common technical feature that defines them over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
